FEATURE PRODUCTS

BIOFOLATE® (L-5-Methyltetrahydrofolate Ca)

Description:

Biofolate® (L-5-Methyltetrahydrofolate Ca, or L-5-MTHF Ca) could be the metabolically active form of folic acid. The "folic acid" found in food could be cleaved (digested) from protein carriers in order to be absorbed. This process may be inefficient in some individuals. Once absorbed, the folic acid could undergo several biochemical conversions in the body to become L-5-MTHF Ca. By supplementing with L-5-MTHF Ca, one could be assured of getting the benefits of folic acid, regardless of the individual's ability to absorb or convert it to the active form.

Applications:

Biofolate® may play an important role in DNA synthesis and repair. It could be especially beneficial for pregnant women to help support against Neural Tube defects. Biofolate® may be used in nutraceutical, food and beverage products.

Advantages:

- USP Grade
- Stable in room temperature
- Pure assay with white color
- 3rd party test report for every batch

- Low heavy metal and microorganism

Storage & Packaging:

Storage temperature not to exceed 77°F (25°C). Product will meet the purity criteria for two years when stored at or below 60°F (15°C) in the original container. Store in tight, light resistant containers, avoid exposure to direct sunlight, moisture, excessive heat. 100grams/tin, 500grams/tin, 1kg/tin
